The Department of Obstetrics and Gynecology was officially opened in September 1920. The country's leading specialist, Professor Dmitry Oskarovich Ott, the author of hundreds of works, including several monographs on practical gynecology, and the founder of the Russian Society of Obstetricians and Gynecologists, was invited to head it.

At the beginning of the 20th century, for a population of more than 3 million in Kuban, there were only 214 doctors and 577 paramedics from all departments. Among the local medical personnel, 106 "midwives" were officially on duty (taken from the "Report of the Head of the Kuban Region and the Ataman of the Kuban Cossack Army for 1915"). There were no women's medical institutions, and perinatal mortality was more than 63%. Therefore, the opening of a medical university in Krasnodar was caused by a burning need.

Before the revolution, D.O. Ott was the court obstetrician, and sometimes sat at the chess table with the emperor himself. For his help to the empress, who became the mother of five children, he was granted a plot of land on Vasilievsky Island in St. Petersburg, where he founded the future research institute of Obstetrics, Gynecology and Reproductology, which is currently one of the leading European centers. Ott symbolized the passing of the baton of advanced Russian science to the Kuban obstetricians and gynecologists.

From 1921 to 1933, the department was headed by Professor Konstantin Davidovich Vachnadze and Doctor of Medicine, Professor Nikolai Vladimirovich Voitsekhovsky. During the period from 1928 to 1933, the staff of the obstetrics department and doctors of the maternity hospital published the first 14 scientific works on the problems of pregnancy pathology, pathological childbirth, and treatment of uterine diseases in the postpartum period in the Kuban Scientific and Medical Bulletin.

In 1934, Professor Georgy Maksimovich Feiertag headed the department. The main scientific research of the department during this period was: diagnostics and therapy of ectopic pregnancy, pain relief in gynecology, improvement of the methods and techniques of combined treatment of cervical cancer, including the use of an electric knife. 25 scientific papers were published. The work of the scientific student circle continued and problems were developed on "Diagnostics and therapy of ectopic pregnancy", "drug pain relief during labor", "improvement of combined treatment of cervical cancer". 25 scientific papers were published.

By 1940, the staff of the obstetrics department had grown to 10 units. A systematic course in obstetrics was read by M.N. Kirievsky and G.M. Feiertag, practical classes were conducted by assistants at the bedsides of pregnant women, women in labor and women in labor. The student circle gathered up to 80 people within its walls.

An important aspect of the department's work was constant communication with the regions of the region, provision of qualified medical care to patients, lecturing, holding consultations, and participation in determining blood groups in the population.

During the Great Patriotic War, the department as part of the institute was evacuated and successfully worked first in Yerevan and then in Tyumen. The department's employees - assistants Martyn Nikolaevich Kireevsky and Danil Vyacheslavovich Kolinko were mobilized to the front and were the heads of large military hospitals. For exemplary performance of service, Kolinko was awarded the Order of the Red Star and the medal "For the Defense of the Caucasus". Kirievsky designed pack horse stretchers for transporting the wounded in mountainous areas at the front.

After the liberation of Kuban from the fascist invaders, in the fall of 1943, despite the destruction of buildings, laboratories and the library, students began their studies without delay.

In 1951, Doctor of Medical Sciences, Professor Ervand Sarkisovich Akopyan was elected head of the department. The department worked on current scientific problems: birth trauma and its prevention, prevention of postoperative complications, artificial formation of the vagina from the rectum. From November 1962 to July 1963, the department was headed by D.V. Kolinko.

Since 1963, Alexander Mikhailovich Kilimnik was elected head of the department. Under the leadership of Professor A.M. Kilimnik, the department staff for many years dealt with scientific problems related to the treatment of menstrual dysfunction, allotransplantation of ovarian and endometrial tissues, as well as the issue of donor tissue conservation. Another important area of scientific research in the work of the department was the conservative-surgical direction in the treatment of gynecological patients, studying working conditions and their impact on the reproductive function of women in the Krasnodar Territory, issues of pediatric and adolescent gynecology, genital tuberculosis.

In total, under the leadership and with the participation of Professor A.M. Kilimnik, 5 doctoral and 17 candidate dissertations were defended over 24 years of work.

In 1984, the main base of the department was Maternity Hospital No. 5 of the State Budgetary Healthcare Institution of the Krasnodar Region. The department took direct part in organizing its work. On the initiative of the department, the first Perinatal Center in the country was created. The idea of its formation and its work were awarded the Gold Medal of the USSR Exhibition of Economic Achievements.

From 1988 to 2009, the department was headed by Doctor of Medical Sciences, Professor Boris Grigorievich Ermoshenko. The main scientific directions of the department: a comprehensive system of forecasting, early diagnostics and therapy of reproductive dysfunction, endoscopic methods of diagnostics and treatment of gynecological patients. During this period, the department staff defended a doctoral dissertation and ten candidate dissertations. 213 articles were published, 3 patents for inventions were received, 27 rationalization proposals were issued.

In 1992, the department became the basis for the creation of the Center for the Protection of Maternal and Child Health at the Institute (since 1994 - the "Basic Obstetrics and Gynecology Clinic").

In 1997, the Department of Obstetrics, Gynecology and Perinatology was formed by dividing the Department of Obstetrics and Gynecology. This department was headed by Doctor of Medical Sciences, Professor Irina Igorevna Kutsenko. The employees of the department carried out the research program "Current Problems of Women's Reproductive Health". Its main areas: diagnostics and treatment of genital endometriosis; regulatory and adaptive capabilities of the body during physiological and pathological pregnancy and childbirth, gynecological pathology; urogenital infection in obstetrics and gynecology, immunology of reproduction, perinatal neurology.

Since February 2010, in order to optimize the educational process, ensure a unified methodological approach to teaching, introduce modern technologies in the treatment and diagnostic process and determine the general scientific direction in the discipline of obstetrics and gynecology, the Department of Obstetrics and Gynecology of the University has been merged with the Department of Obstetrics, Gynecology and Perinatology. Head of the Department is Doctor of Medical Sciences, Professor I.I. Kutsenko. Clinical bases of the department: State Budgetary Healthcare Institution KKB No. 2 Perinatal Center, State Budgetary Healthcare Institution DKB

Perinatal Center, State Budgetary Healthcare Institution of the Republic of Dagestan, State Budgetary Healthcare Institution BSMP, Clinic of the Federal State Budgetary Educational Institution of Higher Education KubSMU.

Under the supervision of I.I. Kutsenko, two comprehensive research projects are currently being carried out: "Ways to Preserve Women's Reproductive Health in the Most Significant Obstetric and Gynecological Pathology" and "Immunology of Reproduction". The main aspects of the immune status in various gynecological pathologies and the possibility of correction are studied.

Professor I. I. Kutsenko is the author and co-author of 66 scientific publications, including 46 journal articles in peer-reviewed publications of the Higher Attestation Commission and 12 - SCOPUS. In total, over the past 10 years, the employees of the department, under the guidance of the head, have published 130 scientific papers, including in the central and foreign press.

The department annually takes part in the work of federal, regional interuniversity scientific-practical and educational-methodical conferences. Under the guidance of I. I. Kutsenko, the department participated in organizing and holding conferences on topical issues of obstetrics and gynecology: 18 international, 36 all-Russian and 48 regional conferences.

Over the past 5 years - 142 scientific reports of the department employees on the topic of R & D, 20 implementation acts and 2 patents for inventions.

Under the guidance of I. I. Kutsenko The staff of the department Rubinina E.R. (in 2022) and Gorrington H.I. (in 2023) successfully defended their dissertations for the degree of candidate of medical sciences. Postgraduate students of the department took part in the XVI All-Russian scientific and practical conference "Young Scientists in Medicine", Kazan, 2011 (3rd degree diploma); the IX scientific and practical conference of young scientists and students of the south of Russia "Medical Science and Healthcare", Krasnodar, 2011 (1st degree diploma); International Congress "Early Pregnancy", Moscow, 2012 (2nd degree diploma); 2021 victory in the "UMNIK" competition; 2022 Governor's competition of youth innovative projects "IQ of the Year Award", 2nd place; 2022 victory in the "UMNIK" competition; 2023 competition "CONNECTIVITY: Youth. Talent. Innovations". 1st place

A team of students (members of the SSS) annually participates in the All-Russian Olympiad in Obstetrics and Gynecology in Moscow. In 2018, a team of students was awarded a 3rd degree diploma for participation in the II All-Russian Student Olympiad in Obstetrics and Gynecology named after L.S. Persianov. In 2019 and 2020, our team took 1st place, in 2022 - 2nd place in the All-Russian Student Olympiad in Obstetrics and Gynecology named after L.S. Persianov.
